- Claim 26. An electronic package comprising:
- a first circuitized substrate having at least one conductive aperture therein having
- 3 an external surface;
- a second circuitized substrate having at least one conductive aperture therein
- 5 having an external surface, said first and second circuitized substrates aligned such that
- 6 said at least one conductive aperture of said first circuitized substrate is substantially
- 7 aligned with said at least one conductive aperture of said second circuitized substrate, said
- 8 at least one conductive aperture of said first circuitized substrate and said at least one
- 9 conductive aperture of said second circuitized substrate including a conductive metallic
- 10 layer thereon selected from the group consisting of copper, nickel, gold, chromium, solder
- 11 and alloys thereof; and
- at least one solder member including a first contact portion extending from said
- 13 external surface of said conductive aperture of said first circuitized substrate, said first
- 14 contact portion including a cross-sectional configuration that is substantially round, oval
- or ellipsoidal, and a second contact portion extending substantially within both of said
- 16 aligned conductive apertures of said first and second circuitized substrates to at least said
- 17 external surface of said conductive aperture of said second circuitized substrate to secure
- 18 said circuitized substrates together.
  - 1 Claim 28. The electronic package of Claim 26 wherein said conductive metallic
  - 2 layer is copper including a protective layer thereon, said protective layer selected from the
  - 3 group consisting of benzotriazole, chlorite, and immersion tin.
